This is because all angles in a triangle always add up to 180° and if you divide this amongst three angles, they have to each equal 60°. We need a few pieces of the puzzle before we can find the measure of x. The area filled in \$\$\$ steps is equal to: \$\$\$sum_{k=1}^n frac{13}{frac{23}^k-1}\$\$\$ At infinity, this geometric sum evaluates to \$\$\$sum_{k=1}^{\infty} frac{13}{(frac{23}^k-1)} = frac{1}{3} (1-2/3)^{-1}\$\$\$ so the whole triangle will be filled, given that we have infinite equilateral triangles of all sizes. Well, some of these types of triangles have special properties! Isosceles Triangle An isosceles triangle has two sides that are congruent. Why would the initial triangle be filled in infinite steps? These would be the two base angles. 2) Maze -As students find the answers to the problem, they follow the correct answer pathway and shade it in as they go, making for very easy grading in the end! **Highlighted path on the cover photo and preview is intentionally incorrect to protect the answer key. Equilateral Triangle In an equilateral triangle, all sides are congruent AND all angles are congruent.
