Collate pdfs together

This feature is also available using the PostScript 3. Printer Driver for details, see PostScript supplement 3. The bending types other than Z-Fold cannot be used with the separation sheet function. The rings binding function cannot be used with the separation sheet function. If combined with the PUNCH function, the PUNCH function does not apply on the separation sheets. If both sample printing that the separation sheet function are enabled, the separation sheets will not be inserted in the first set of copies. If both the functions of the cover sheet which of the separation sheet are enabled, a separation sheet will be entered before the coverage sheet. Rotating collection does not apply in separation sheets. If the setting (switching of the extended automatic tray] and the rotary collection function are enabled when the paper in the selected tray runs out, the [Automatic interruption of the extended automatic tray] will be disabled. An error message will then be displayed which Report empty empty paper. When the collation rotation has been selected, the print speed will be more slow than other collatering functions. The separation sheets cannot be inserted if it is specified "Slip sheet". If it is not You can reduce the gearbox even with an optional installed finisher, the options may not be set correctly in the printer driver. To correct the printer driver options settings, see "Making option settings for the printer". For Details, see the printer driver's guide. (A "A A»
