Just disconnect the device and access it without any model lock. You can watch the following video on how to unlock the Android phone, and you can explore more from Wondershare Video Community. You can set a screen lock to protect your Android phone or tablet. Each time the device turns on or wake up the screen, you will be asked to unlock the device, usually with a PIN, a model or password. On some devices, you can unlock with your fingerprints. Set or A screen lock IMPORTANT: To ensure that automatic and manual backups are encrypted with the screen lock, use a PIN, a model or password. Find out how to back up or restore data on your phone. Open the phone settings app. Touch security. To choose a sort of screen lock, tap screen lock. If you have already set a lock, you will need to insert the PIN, the model or or Before you can choose a different lock. Tap the screen lock option you want to use. Follow the instructions on the screen. To change the screen lock settings, next to "Screen Lock", tap Settings. Settings include automatic lock timing, power button lock and a lock screen message. Screen lock options No block: the phone remains unlocked. This does not give protection, but you can get to the home screen quickly. Swipe: scroll through the screen. This does not give protection, but you can get to the home screen quickly. Standard lock pattern: draw a simple model with your finger. PIN: Insert 4 or more numbers. The longer pins tend to be more confident. Password: enter 4 or more letters or numbers. A strong password is the most secure screen lock option. Multiple Locks Tip: You can temporarily turn off fingerprint release and Smart Lock activating the block. Find out how to use the block. Related resources Keep your personal information securely. Set a security option on your phone or tablet to prevent strangers from accessing contacts, personal information or other important data. Get the steps to protect your device with our safety device support tutorials. There is a common question that Android phone users ask online and that is â € œHow can I have hack or remove my screen lock model? Â € â € â € an important question because that block screen model This is what prevents the phone from being accessible by anyone else as well as yourself. It is often encouraged to change your model the most often possible, preferably every couple of months. It is an important aspect to protect data at all times. There is a lot that we keep in our phones. You don't just have your contacts on your phone. You are probably using the phone to store images, access e-mails, make your banking, save or download documents and a myriad of other things. Our phones have become an important tool in our lives. Being able to access the phone because you forgot the block screen model can be distressing. Most Android phones will allow you to continue entering your model at least 5 times before it is completely blocked. If this is where it is yourself, it is not necessary to panic. There are things you can do to remove / hack the lock screen template. Here we discuss three easy solutions to remove a model lock. Most people have familiarized with a factory reset as a method to solve access problems. If you haven't familiar with how it's done or you've never done a factory reset on your Android phone we'll talk how to go about doing it. Solution 1: Remove the block template with your Google account. Solution 2: Delete your lock screen model with Android Lock Screen Removal Toolkit. Solution 3: Factory- reset your Android phone to delete the block model. Solution 1: Remove the block template with your Google account. The phone could be blocked after entering the wrong screen model for about five times. When this happens, your phone might tell you to wait 30 seconds before tryingone last time. If the correct model still does not return to you, then you can use the Find function - My - Google device. This usually comes like a standard feature on Android phones, but there are some pre-condition conditions. The first is that you need to have a Google account. The second is that you need enabled the function on the Android device to make it work. This feature is intended to do more than helping to locate the phone remotely, but remove the screen lock model and remote data as well. Here's how you would like to apply this solution: Step 1: You will need to access Google find my device on another device. Step 2: Log in to your Google account. Click on the locked device. Step 3: Choose â € œArâ € to delete the data and the screen model. Tip: Check if the function has been enabled by going to Settings> Account> Google> Security> Find my device. If it was enabled, then you will be able to delete the screen model remotely. Of course, you can only check this on the real device so that it would be useless to try to check after the fact. So if you are reading this on your phone. Do this now, check and enable the function. You may need to use it in the future. This might seem like an easy solution, but it's a catastrophic solution because you cancel everything on your phone. So not only will you remove the screen model, but all your contacts, photos, videos, messages â € "all! Solution 2: Delete your lock screen template with Android Lock Screen Removal Toolkit. You can remove the lock screen model without affecting any other information from the Android device using the Android Toolkit Lock Screen Removal, you can download for free try the toolkit. The toolkit does not require special skills. There is a problem but only works for Samsung and LG smart devices. A version that will work for a larger range of brands is currently under development. Download Windownload Step 1: Download the Toolkit from the site and install it on your computer. You will get a dashboard with a number of options. Choose the â € œRemove Lock Screenâ € function and click â € œstart.â € step 2: Connect the phone and computer with a USB cable. You should get a list of Android phone models (Samsung, LG, motorcycle, Google Pixels, Huawei) that the toolkit supports. Choose the model of your device and click on "Next". Step 3. Wait for the software to recognize the device in Download mode, and then select "Remove" to delete the lock screen template. Wait a few minutes for your phone to restart and the screen lock model to be deleted. Solution 3: Factory - Reset the Android phone to delete the block model. If the first solution It works, you might have to resort to more severe measures. Factory reset also known as a hard reset is an effective hard method. Follow these steps to restore your device hard. Step 1. Turn off your Android phone Step 2. Start in recovery mode. i. For Samsung device: Keep KeepingHome/Bixby button + volume up button + power button until you start the phone in the software update screen. you will see the following screen. after 30 seconds a great "!" will be presented. after about 1 ammunition you are in recovery mode. ii. other android phones press the power keys and volume a couple of seconds and switches directly to Recovery-Mode. Iii. for a google nexus/ pixel a. press the power and volume keys at the same time to get the android device in Fast-boot mode. b. Select Recovery-Mode using the Up/Down volume button and then press the power button to enter. Step 3. use the volume up/down to go to wipe data/Factory-reset option on the screen and press the power button to enter. Step 4. Select ok and your android device will reset or return to the factory's original settings and restart automatically. Conclusions when comparing these three solutions, clearly the best solution is that that allows you to delete the screen lock model without affecting one of your data. Android-Lock-Screen-Removal is by far the most efficient solution. solution.
