Triangulation is a research technique used in mixed method research design to enhance the validity and reliability of findings by integrating various data sources. Different forms of triangulation include data, methodological, and investigator triangulation, each contributing to a more comprehensive understanding of research phenomena. Despite its advantages, such as increased generalizability and depth of insights, triangulation also poses challenges, including time consumption and complexity in data integration. Researchers must navigate these challenges while leveraging triangulation to improve the rigor and applicability of their studies. Figures (1) Creswell, J. W., & Plano Clark, V. L. (2011). Designing and conducting mixed methods research. Sage Publications. Denzin, N. K. (1978). The research act: A theoretical introduction to sociological methods. McGraw-Hill. Johnson, R. B., & Onwuegbuzie, A. J. (2004). Mixed methods research: A review of the literature. Journal of Mixed Methods Research, 1(1), 3-24. Please wait while we attempt to authenticate you... This special issue of the Journal of Mixed Methods Research explores the concept of triangulation within the context of mixed methods research, addressing its utility in validating research findings and fostering nuanced understandings. The contributors challenge traditional postpositivist paradigms by arguing for a qualitatively framed approach that emphasizes social justice and inclusivity, particularly for marginalized voices. Through a dialogic process, the issue aims to enhance the theoretical and practical framework of triangulation and its application in mixed methods research.
