NAT helps reuse IP addresses and improve security -- find out how it works.By Jeff Tyson Three types of computer networks are local area networks, metropolitan area networks and wide area networks. They are categorized by their size and the purpose they serve, which can be general or specific. Local area networks cover a single site, such as an office building. They facilitate sharing of resources, such as printers and storage media. Local area networks are normally created by wired connections, but they can have wireless connections. They are characterized by high-speed communication and are cheaper to implement than other computer networks. Metropolitan area networks cover a small region, an entire campus or a whole city. They connect many local area networks. Wide area networks cover a whole country and can span across the entire world, such as the Internet. A computer with minimal memory, disk storage and processor power designed to connect to a network, especially the Internet. The idea behind network computers is that many users who are connected to a network don't need all the computer power they get from a typical personal computer. Instead, they can rely on the power of the network servers. This is really a variation on an old idea — diskless workstations — which are computers that contain memory and a processor but no disk storage. Instead, they rely on a server to store data. Network computers take this idea one step further by also minimizing the amount of memory and processor power required by the workstation. Network computers designed to connect to the Internet are sometimes called Internet boxes, Net PCs, and Internet appliances. One of the strongest arguments behind network computers is that they reduce the total cost of ownership (TCO)— not only because the machines themselves are less expensive than PCs, but also because network computers can be administered and updated from a central network server. computer network mcqs pdf. computer network mcq with answers pdf. computer network mcq sanfoundry. computer network mcq examveda. computer network mcq questions and answers. computer network mcq geeksforgeeks. computer network mcq in hindi. computer network mcq sppu
