Chauvet nimbus jr manual

Chauvet nimbus jr. Chauvet nimbus manual.

Nimbusea © a professional dry ice machine that produces no © flies thick and white to embrace the ground and dissipate without getting up. This powerful machine heats up enough water to create no © flies from 10lbs of dry ice to provide 6 minutes of operating time. Health and flow are easily controlled, thanks to an adjustable multi-level control arm. Double heaters allow for faster heating and recycling times. A low water sensor increases the safety. Rolling cart does not incline. Professional dry-ice professional area creates no © fly thick and white that embraces the ground floor simple. Plugin-play heats water rapidly to its operating temperature optimum and the second heating element heats water in half the time. Multi-level, adjustable control morning controls controls air and temperature automatically disconnect heaters For increased security rental opportunities:+\$25-Add Carrier to facilitate portability in your event. Input voltage specifications: 120 V 60 Power and current (single element): 15W, 12.6 Power and current (dual element): 2.2 The Tank capacity is: 4.5 is the Heat-up time (single element): fifty-minute Heat-up time (single element): the Heat-up time (dual element): thirty-minute(dual element): thirty-minute and Average time runtime: six minutes and Rehtime (single): thirty-thirty-year year single: thirty-year year start-up time Max water temperature: 175th-F is Weight (empty): 28.6 is Weight (full): 75lbs: 20:18x 19x x in Europe Approvals: EC, MET SETUP USE (User Manual)We assume you have already soundry (not provided), and pellet in. Put the machine on a flat surface. Just hook up the power line to the wall. NOTE: Make sure that the take is © a 20amp circuit, and that nothing else is connected to this circuit. Nimbus will need the full 20amp during use (do not want a circuit breaker to trip Your event!). ä, if you are not sure if it is in a dedicated 20AMP circuit, you must contact an electrician or maintenance of the bullder to confirm. Enlarge Basket at your highest level with the operation lever. Open the lid and fill with water until the bottom of the basket - the red light should light indicating that the heating elements are to be heated. A contrary case, fill a little more. Using protecting equipment, loading the basket with 10LB dry ice. Note: The dry ice must be loaded in the last possible moment.ä, close and lock the lid as soon as the green light comes on, the unit is ready. Take on the operation lever and slowly lower the handle until a low outlion and high exit. Note: Once the ice reaches that water, the dry ice effect begging to get out of the machine. There is in mind to ensure that your event that coordinates with the release of the Dry ice effect. When the skirt slows or pair, lift and refueling basket.Note: the area directly in front of the outlet nozzle, it will be wet with humidity. We recommend that this area is maintained clean to avoid slipping and fall, and immediately wiped and dry after usual use. unity.ä, hope that the machine and any water remaining in the interior cools completely. Pour all the cooled water from the internal deposit of the product. Transport articles if water is still hot. Important: due to water evaporation, it may be necessary to replenish Nimbus with water to drive the red LED indicator. Once the red light, repeat steps 4 to 7. WARNING: There is an optional power entry next to the main feed input to increase the rate in which the water is heated. to a secondary entry to a separate circuit to heat the water in half the time. The Nimbus is equipped with a safety device that prevents heaters in the unit from turning on when the water level is © Too low. Is if the safety closing function has been activated, just add more water to continue to use Nimbus. HOT HOT HOT! IS During operation, the top plate becomes VERY HOT. IT'S NOT THE TOUCH! During heating and operation the water will be burning hot. Just don't put your hand in the water. Not handling dry ice with your bare hands. Thick gloves should be used. The dry ice MUST be stored INTERIOR to the inner basket for optimal performance. Do not remove this basket, as serious body injuries may occur. Questions? Questions? Is Support © technical?
