You can remove or delete some of the built-in apps that come with your iPhone.Note: When you remove a built-in app from your iPhone, you also remove any related user data and configuration files. Removing built-in apps from your iPhone can also affect other system functionality.If you change your mind after deleting apps, you can download them again later (if theyre still available in the AppStore).Do any of the following:Remove an app from the Home Screen: Touch and hold the app on the Home Screen, tap Remove App, then tap Remove from Home Screen to keep it in App Library, or tap Delete App to delete it from iPhone.Delete an app from App Library and the Home Screen: Touch and hold the app in App Library, tap Delete App, then tap Delete. (See Find your apps in App Library.)If you change your mind, you can redownload apps you remove.In addition to removing third-party apps, you can remove the following built-in Apple apps that came with your iPhone: You try to remove a program, but that program wont uninstall on your Windows PC. This happens for various reasons, some of which are not related to the program but to your computer. This tutorial highlights ways to remove stubborn applications that wont uninstall on Windows 10 and 11 computers. Windows usually prohibits uninstalling open applications running in the foreground on your computer. Likewise, you might be unable to uninstall applications whose core processes are active/running in the background. To resolve the issue, force-close the app (especially if its freezing or unresponsive) before uninstalling it from Settings or Control Panel. Right-click the Windows taskbar and select Task Manager on the Quick Link menu.Open the Processes tab in Task Manager, right-click the program you want to force-close and select End task. If you installed an app from the Microsoft Store, you can terminate it and its related process through the Windows Settings menu. Go to Settings > Apps > Installed apps, select the three-dot menu icon next to the app, and select Advanced options. Select the Terminate button in the Terminate section to force-close the app. Afterward, uninstall the app through Windows Settings or Control Panel to remove the program from your PC. The easiest way to remove apps in Windows is through the built-in Settings app and Control Panel. See the headings below for step-by-step instructions. Press theWindows key+Ito open theSettingsapp. Choose Apps in the sidebar and select Installed apps. Locate the app you want to uninstall on the list of installed applications. Select the three-dot menu icon next to the app and choose Uninstall. Select Uninstall on the confirmation pop-up to remove the program from your computer. If your PC runs Windows 10, go to Settings > Apps, select the program you want to remove and choose Uninstall. Select Uninstall beneath the program name to remove the program. Try removing the affected application(s) through the Control Panel if it wont uninstall through Windows Settings. Launch Control Panel by opening the Start menu, searching for Control Panel, and selecting Control Panel in the search results.Select Uninstall a program (underneath Programs) in the Control Panel window.Select the program you want to remove and choose Uninstall on the top menuat the top of the programs list.Choose Yes on the confirmation prompt and follow the on-screen instructions to finish the process. Explore the options below to remove stubborn programs that wont uninstall through Control Panel or Windows Settings. Many apps come bundled with a dedicated uninstall tool. You can use this tool to remove that program from your PC. Its worth using this tool if Settings or Control Panel doesnt uninstall the app. Many applications have their dedicated uninstaller in the directory where theyre installed on your computer. For example, the Avidemux app has its uninstaller (named Uninstall Avidemux VC++ 64bits.exe) in the following directory: C:\Program Files\Avidemux 2.7 VC++ 64bits You can find an apps file directory by searching the app in the Start menu and choosing Open file location. Opening that tool launches a wizard that helps uninstall the program and deletes its files from your computer. Microsoft offers a Program Install and Uninstall troubleshooter that repairs or fixes issues preventing you from uninstalling programs from your PC. The tool checks for corrupt registry, control update data, Visit the Program Install and Uninstall download page and save the troubleshooter on your PC. Double-click the downloaded file to open the tool. Select Next on the tools first screen.Select Uninstalling on the following screen.Wait while the tool detects uninstallation issues with applications installed on your PC. When the tool generates a list of programs, select the problematic program and choose Next. Select Not Listed if you dont see the program listed.The tool will then help remove the selected program from your PC. You can run a command in Command Prompt to remove stubborn apps from your computer. Search command prompt in the Start menu and select Run as administrator.Choose Yes in the User Account Control prompt. Enter the following command on the Command Prompt window and press Enter: wmic Type the following command and press Enter: product get name. Note the program name you want to remove from the list.Uninstall the problematic program by running the following command: product where name= PROGRAM call uninstall. Replace PROGRAM with the actual program name that you noted above. Third-party processes, malware, and system configuration issues can interfere with an apps removal. Booting your PC into Safe Mode can stop this interference and allow the uninstallation of stubborn programs. Press the Windows key + I to open the Windows Settings app. Select System on the sidebar, choose Recovery, and select the Restart now button in the Advanced startup row. Go to Settings > Update & Security > Recovery > Restart now if you have a Windows 10 PC. When your PC restarts, youll see a Choose an option screen. From here, navigate to Troubleshoot > Advanced options > Startup Settings, and select Restart.Select the number 4 on the following screen to boot your PC in safe mode. When your PC is in safe mode, use either Settings or Control Panel to remove your stubborn program. Restart your PC to bring it back to normal mode. Problematic apps are everywhere; some just dont want to leave your PC. If you ever encounter one, you know how to get it off your computer forever. After uninstalling the app, consider running a malware scan using theWindows Malicious Software Removal Tool. Windows 11, the latest major release from Microsoft, introduces a fresh and streamlined user interface alongside numerous features aimed at enhancing user experience and productivity. Managing your installed programsadding new ones or removing unnecessary applicationsis a fundamental aspect of maintaining your systems health, security, and performance. Whether youre a casual user or an advanced tech enthusiast, understanding how to effectively install or uninstall programs on Windows 11 is essential.In this comprehensive guide, we will walk you through the different methods available to add or remove programs in Windows 11, including using the Settings app, Control Panel, Start menu, PowerShell, and third-party tools. Well also explore best practices for installing new software safely and removing programs completely to avoid leftover files or registry entries that can clutter your system. Part 1: Adding Programs in Windows 11Adding a program to your Windows 11 device typically involves downloading the software, executing the installer, and following the setup instructions carefully. Depending on the source of the programwhether from the Microsoft Store, a direct download from a website, or through other distribution channelsthe installation process may vary.1. Installing Applications from the Microsoft StoreThe Microsoft Store, integrated into Windows 11, offers a secure and convenient way to find, download, and install apps and games. Steps to Install Apps from Microsoft Store:Open Microsoft Store:Click on the Start button or press the Windows key.Type Microsoft Store in the search bar and select the app from the results.Browse or Search for Applications:Use the search bar within the Store to find specific apps.Browse different categories, charts, or curated lists for recommendations.Select the Desired App:Click on the apps icon to open its detailed page.Check Compatibility and Requirements:Read the app description, system requirements, and reviews.Install the Application:Click the Get (or Install) button.Sign in with your Microsoft account if prompted.The installation process will begin, and you may see a progress indicator.Launch the App:Once installed, you can open the program directly from the Store or find it in the Start menu.Advantages of Using Microsoft Store:Safe, verified applications.Easy updates managed automatically.Sandbox environment reducing security risks.2. Installing Programs via Downloaded InstallersMost desktop applications are downloaded directly from manufacturer websites or trusted sources.Steps to Install Desktop Applications:Download the Installer:Visit the official website of the application.Look for the Download section.Save the installer file (usually a .exe, .msi, or .zip) to your preferred location.Run the Installer:Double-click the downloaded file to start the installation.If prompted by User Account Control (UAC), click Yes.Follow the Installation Wizard:Read the license agreement and accept the terms.Choose installation options (custom or typical).Select the installation directory, if applicable.Decide whether to create shortcuts or other preferences.Complete the Installation:Wait for the process to finish.Click Finish when the setup completes.Launch the program from the Start menu or desktop shortcut.Best Practices:Download from official or trusted sources.Beware of bundled adware; opt for custom installations to deselect unwanted components.Keep installers in case you need to reinstall later. Part 2: Removing or Uninstalling Programs in Windows 11Removing programs that are no longer needed can free up disk space, improve system performance, and enhance security. Windows 11 provides multiple methods for uninstallation, catering to different types of applications, from modern UWP apps to traditional desktop programs.1. Using the Settings AppThe easiest way to uninstall most programs in Windows 11 is through the Settings app.Steps to Uninstall via Settings:Open Settings:Click on the Start menu and select Settings, or press Windows + I.Navigate to Apps:In the Settings sidebar, click Apps.Choose Installed apps.Find the Program:Use the search bar or scroll through the list to find the application you want to remove.Uninstall the Program:Click the three-dot menu next to the app.Select Uninstall.Confirm when prompted.Follow Uninstallation Wizard:Some programs will launch their uninstaller.Follow the prompts to complete the removal.Note: Some pre-installed or system-critical apps cannot be uninstalled this way.For traditional programs, the uninstaller is invoked automatically.2. Using the Start MenuMany applications can be uninstalled directly from the Start menu, especially modern UWP apps.Steps: 3. Using Control Panel (Classic Method)While Windows 11 moves towards the Settings app, it still supports the traditional Control Panel method.Steps to Uninstall via Control Panel:Open Control Panel:Type Control Panel in the search bar and select it.Navigate to Programs:Click Programs > Programs and Features.Find the Program:Scroll or search to find the application.Uninstall:Right-click the program and select Uninstall.Follow the uninstaller prompts.This method is especially useful for traditional desktop applications.4. Using PowerShellPowerShell offers a powerful way to uninstall programs, especially useful for automation or removing multiple applications.Steps:Open PowerShell as Administrator:Search for PowerShell.Right-click and choose Run as administrator.List Installed Programs: Get-WmiObject -Class Win32_Product | Select-Object -Property NameNote: This may trigger repair operations on some software, so use with caution.Uninstall a Program:Use the Get-WmiObject output to identify the product.Run:Get-WmiObject -Class Win32_Product -Filter "Name='Program Name'" | ForEach-Object { $_.Uninstall() }Replace 'Program Name' with the exact programs name.Driver Updater - Update Drivers Automatically Caution:Using Win32_Product can have unintended side effects, such as triggering repairs. Use dedicated uninstaller tools for complex applications.5. Using Third-Party Uninstaller ToolsSeveral third-party tools can help you remove stubborn or leftover files from uninstalled programs. Examples include:Revo UninstallerIObit UninstallerGeekUninstallerFeatures:Deep cleaning of leftover files and registry entries.Batch uninstallation.Monitoring applications during installation for better removal later.Usage Tips:Always download from trusted sources.Keep the tools updated.Use with care, especially when deleting registry entries. Part 3: Best Practices for Managing Programs in Windows 11Update Drivers Fix Your PC Managing applications effectively involves more than just installing or uninstalling. Here are best practices to keep your system clean, secure, and running optimally.1. Regularly Review Installed ApplicationsPeriodically check your installed programs via Settings > Apps > Installed apps. Remove software you no longer need to conserve disk space and improve performance.2. Keep Software Up-to-DateStay current with updates for both Windows and your installed applications. Updated software often includes security patches and performance improvements.3. Use Trusted SourcesAlways download applications from official sources or reputable providers. Avoid pirated software, which can be riddled with malware.4. Be Cautious with Bloatware and Pre-Installed AppsSome devices come with pre-installed applications that you may not need. Uninstall them if possible, but be careful not to remove essential system apps.5. Backup Before Major ChangesBefore removing or installing significantly impactful programs, consider creating a system restore point or backing up important data. Part 4: Troubleshooting Common IssuesSometimes, uninstalling applications may not proceed smoothly. Here are common issues and their solutions:1. Program Wont UninstallSolutions:Use the programs own uninstaller, often found in the program folder.Use PowerShell or third-party uninstallers.Boot into Safe Mode and attempt uninstallation again.Check for malware if uninstallation seems suspicious.2. Leftover Files After UninstallationSolutions:Use third-party cleanup tools.Manually delete residual files from Program Files, Program Files (x86), or your user directory.Clean the registry with caution or use registry cleaning tools.3. Uninstallation Fails or CrashesSolutions:Repair the program via the installer.Use the Windows Troubleshooter for program uninstallation.Reboot your system and try again.Contact support if issues persist. Part 5: ConclusionUpdate Drivers Fix Your PC Managing your programs in Windows 11 is a fundamental task that helps ensure your device remains secure, efficient, and tailored to your needs. Whether youre adding new applications from the Microsoft Store or trusted websites, or removing outdated or unwanted software, Windows provides various tools to facilitate these processes.Understanding the different methodsusing Settings, Start menu, Control Panel, PowerShell, or third-party toolsenables you to choose the best approach based on your technical comfort level and specific circumstances. Remember, always prioritize software from reputable sources and keep your system updated for optimal performance.By staying vigilant and methodical in managing your applications, you can enjoy a smooth and secure Windows 11 experience. Home / SoftwareKeep Blog / How to Install and Uninstall Applications in Windows 10 Rick Akura Wondering how to install and uninstall your apps? Use these simple, easy-to-follow solutions to you want to Install or Uninstall an Application in Windows 10. Installing new applications and uninstalling those you no longer need in Windows 10 is the most basic form of computer maintenance. This article will look at how you can perform these two tasks when operating a Windows 10 device. In summary, the process of installing or uninstalling applications in Window 10 goes likes this: In the search box on the taskbar, type Control Panel and select it from the results.Select Programs > Programs and Features.Press and hold (or right-click) on the program you want to remove and select Uninstall or Uninstall/Change. Then follow the directions on the screen. We've discussed these steps in detail below! Before we dive in Although Windows 10 comes with a solid lineup of built-in software, such as Microsoft Edge for browsing, its never a setback to install new, third-party apps. You can perform more tasks and get your hands on additional functionality. At the same time, some applications may become obsolete over time and you may want to remove them to free up space. Some programs also cause conflict on your device, which means its better to uninstall them. You can do this easily from Windows 10 itself. How to install applications in Windows 10 There are two options when it comes to installing new applications on your computer. Via installer If you purchased a physical copy of software or downloaded an application from the internet, you have to use the provided installer. This is an executable file (meaning it has the .exe file extension) that, upon being launched, installs the software onto your computer. In the installer, you get to configure your installation for your own liking. Some developers let you customize how you want to install the software, the location, and other options. This varies from installer to installer. Heres a general guide on how to install an application with an installer. As an example, well be installing Malwarebytes, available from the SoftwareKeep store. Get the installer on your device. If you have the physical copy of an application, install the CD/DVD or other media into your device. Otherwise, download the installer from the internet.Find the executable. This file usually has an installer in its name and has the .exe file extension. Once you locate it, double click on it to launch it.If prompted by the UAC (User Account Control), click Yes to allow the installer to make changes on your device.Allow Windows 10 to extract the installation files and launch the installation wizard. Depending on the application youre installing and your device itself, this might take some time.Follow the on-screen instructions provided by the installer. You can proceed by hitting the Next button. Make sure to customize your installation if the option comes up.You can change the install location by clicking on the Browse button whenever the installer gives you the option. Simply navigate to the desired folder on any of your drives and hit OK. Always make sure the drive youre installing on has enough available space.Agree to the license terms and click the Install button.In some cases, you might have to restart your computer before you can start using the application. This will show up as a prompt where you get to choose whether you want to restart right away or restart manually later.Via the Microsoft Store For more security, youre able to get apps and games through the Microsoft Store. Search for free and paid apps, view popularity and ratings and download them to your device. Apps obtained via the Microsoft Store will also get updated automatically, so you always have the latest features. Here's how to download apps and games so you can get up and running right away. Click on the Start menu.From the application list, scroll down and select the Microsoft Store.Visit the Apps or Games tab in Microsoft Store and start browsing. To see more of a category, select Show all at the bottom of the row.Select the app or game you'd like to download, then select on the Get button. This will start the download of the software.Click the Install button to install the application of the software. How to uninstall applications in Windows 10 Click on the Start menu in your taskbar. This icon has the Windows 10 logo on it. If youre not familiar with the Windows 10 interface, we recommend reading the Get Started with Windows 10 article on our website.Select the Settings icon, indicated by a gear. Alternatively, you can use the Windows + I keyboard shortcut to reach this application quicker.Click on the Apps tile.Switch to Apps & Features from the left-side panel. You should see a list of applications currently installed on your computer that are detectable by Windows 10.Select the application you want to uninstall by clicking on it once. Now, you can click on the Uninstall button.Click the Uninstall button again to confirm your choice and open the helper wizard. This will open up in a new window. Please note that you can only uninstall one app at a time.If prompted by the UAC (User Account Control), click Yes to allow the uninstaller to make changes on your device.Follow the on-screen instructions provided by the developer. In some cases, you have the option to save configuration files on your device in case you plan to reinstall the same application in the future.Progress using the Next button, similarly to installations.Wait for the uninstallation to complete. This might take several minutes depending on the application youre removing and your device.Final thoughts We hope that this guide was able to show you how to install and uninstall applications in Windows 10. If you ever need further assistance, our customer service is happy to guide you through any issues you might have. Home Tech Tips Windows How to Install and Uninstall Apps on Windows Computer? Installing new apps to facilitate the accomplishment of various tasks in Windows is not something that users do frequently. Also, if some applications are not working correctly or you no longer need them, it is always healthy to uninstall them from your computer. It not only helps to gain storage space but also improve the speed of your computer. Windows provides various methods through which users can add or remove apps to or from their computer. Below are the ways through which you can install or uninstall apps on Windows PC. There are so many apps that you can install on your Windows PC to help you perform a given task. These applications come from different providers, but the installation process is generally the same using the executable files or through Microsoft Store app. To install an app, you need to have the installation file in a disk, flash drive or downloaded and saved on your computer hard disk. For instance, to install Microsoft Office, locate the executable file and double-click on it to start the installation.Start Installation If asked whether to allow the program to make changes to the computer, click Yes to continue. Allow Windows to extract the installation files and launch the installation wizard.Extracting Files Read the License Terms and tick the I accept the terms of this agreement box, then click Continue.Accept T&Cs Click on Install Now button to start the installation process. Wait for the app to install. You can see the installation progress displayed with a bar that loads as the app installs.Installing Program You will get a notification when the app has been successfully installed. Click Finish to complete the installation.Complete Installation All Windows PC comes with a default marketplace app called Microsoft Store. This is an official app from Microsoft facilitating purchasing free and premium apps for your PC from various developers. If you are using Windows 11, shortcut for Microsoft Store app will be available in taskbar. Otherwise, you can use Windows Search box and find the app from your computer. Open Microsoft Store in Windows 11 When you are in Store app, use the search box to find your favorite program. Simply, click on Get button to install the app on your system. Install Microsoft PowerToys from Store Before you start installing an app, it is important to check whether your system meets the requirements for that particular version of app. Installation process differs from one app to the other but in most cases, the procedure is plug and play. The installation process may take seconds to a few minutes depending on the size of the app, but installation can run in the background as you continue working on your PC. Unlike apps available on third-party websites, apps from Store are safe and you can easily check user reviews before installing them. For some reasons, you may want to remove an application from your PC. Windows allows you to do so in two simple ways: Follow the steps if you are using Windows 10. Open Windows settings and then go to Apps settings. Select Apps and features on the left sidebar and scroll down the page to find the app you want to uninstall from the list. Click on the app and then the Uninstall button.Uninstall Program Click Yes to confirm the action allow the app to make changes to the computer. The uninstallation wizard will open and follow the on-screen instructions to continue with the process. Click Finish to complete uninstalling the app.Complete Uninstallation Follow the steps if you are using Windows 11. The procedure is same in Windows 11 though the interface is somewhat modern. When you are in Settings > Apps > Installed apps section, use the search box to filter the app that you want to delete. After finding the app, click on the three dots icon (More options) showing against the app and select Uninstall option. Uninstall Copilot App Confirm the action to delete the selected app from your computer. Confirm Uninstalling App Note: Whether you are using Windows 11 or 10 version, you cans uninstall certain system apps like Microsoft Edge browser. You will see the Uninstall option is greyed out for such system apps. Search for Control Panel using Windows Search and open the app. Navigate to Uninstall a program found under the Programs category. This will open a list of programs installed on your PC and select the program you want to remove. Then click on the Uninstall option located at the top of the list. For some apps, you will see Uninstall/Change option instead of Uninstall. This will launch the uninstaller for that apps and confirm the pop-up when asked whether you really need to remove the program.Uninstall The removal process will start and you can see the progress. Follow the instruction keenly to completely and safely remove the program.Uninstall App and Data in Windows 11 Remember, deleting some of the apps will remove all data and documents associated with the app. For example, deleting WhatsApp app will remove all chat and document history stored on your computer. However, some apps like Microsoft Word will only delete the installation setup and not delete the documents. Also, do not directly delete the .exe files bypassing the uninstallation process either from Settings app or from Control Panel. This will result in residual files left over without deletion leaving junk files on your system. Apples Mac has similar installation process for apps. However, the installation file will not be an executable .exe file. Mac installer file is a disk image file with .dmg extension. You can simply extract the file like a zip archive and use the application. There are also some developers offer installer package which needs to be installed similar to Windows programs. The uninstallation process is super simple on Mac. You can simply drag and drop the app to trash to delete it from your computer. Learn more on installing and uninstalling apps on Mac. From time to time, you will need to install and uninstall programs in Windows computer. Luckily, the installation and uninstallation process is similar for almost all applications, and you can follow the above simple steps to add or remove any programs on your PC. Tags: AppsInstallationProgram Uninstalling an app in Windows 11 is a straightforward task that anyone can master in just a few clicks. You can do it by navigating through the Start menu, using the Settings app, or through the Control Panel. Once you find the app you no longer need, you can easily remove it from your system, freeing up space and keeping your computer organized. In this section, well break down the steps needed to uninstall an app from Windows 11. Whether youre cleaning up unused programs or troubleshooting an issue, these steps will guide you through the process with ease. Click on the Windows icon on your taskbar to access the Start menu. The Start menu is the gateway to all your programs and system settings. By clicking the Windows icon, you summon this hub of activity, making it the perfect starting point for uninstalling apps. Select the gear-shaped icon to open the Settings app. Settings is your control center, packed with options to manage how your computer looks and behaves. Its where youll find the tools to uninstall apps, among other things. Within the Settings app, choose Apps from the list. Selecting Apps in Settings directs you to a list of all applications installed on your device. Its like looking at the blueprint of your computers software setup. Browse the list or use the search bar to locate the app you want to uninstall. Scrolling through this list might feel like exploring a digital library. The search bar is your secret weapon here, quickly navigating to the app you wish to remove. Click on the app and select Uninstall to remove it. When you hit Uninstall, Windows will guide you through the removal process. Its like saying a fond farewell to your app, making space for new adventuresor applications. After uninstalling an app, you might notice your computer running a little smoother. Unused apps can sometimes slow things down, so removing them can enhance performance. Plus, youll free up some storage space, giving you more room for the programs you actually use. Make sure to close the app before uninstalling it to avoid errors. Regularly check for unused apps to keep your system clutter-free. If an app doesnt uninstall, try restarting your computer and attempting again. Use the Add or Remove Programs option in Control Panel for stubborn apps. Be cautious not to uninstall system apps that are crucial for Windows operation.
