## Giant defy 1 frame size

105 © 1996-2015, Amazon.com, Inc. or its affiliates Next you will find the Giant Challenge 1 Challenge 1 comes to £100 more convenient than range-topping 0, with key changes seen in the transmission. Where Ultegra was there before, the 1 presents the 105 Shimano groups, with a non-standard chain set and the Tektro double calipers. The supplied wheels remain the same as 0, with Giant's P-R2 used for rolling stock in tandem with Giant's P-SL1 tires. The Disc Defy 1 is the Giant-topping disc bike equipped with the Giant Defy 1 Disc – RRP £999, now £799.20 The disc version of the 1 features the same level of components as the rim brakes, but obviously has disc brakes in the form of TRP Spyre Alloy mechanical discs with 160 mm rotors. This means that the flyer also saw a change, with the P-R2 shod disc wheels on this £999 bike (now £799.20). The Defy 2 is the cheapest bike to use the ALUXX-SL frame 2016 Giant Defy 2 Road Bike – RRP £749, now £599.20 The Defy 2 is the cheapest bike to build Giant's leading ALUXX-SL frames, with a £749 RRP. The Tiagra group at ten speeds of Shimano, equipped with a four-arm set and a 11-32t climbing cassette. The bike also maintains the D-Fuse composite seat and the carbon composite fork. The wheels are Giant's S-R2, connected with stainless steel beams and their Tracker Sport Road hubs. The Defy 2 disc is the second alloy disc bike Challenge Giant Defy 2 Disc – RRP £849, now £679.20 As with the Defy 1 disc, the Defy 2 disc emulates the brake version of the circle equally predicted, with changes again seen with the type of wheels. The brakes remain the same as Defy 1 Disc, with a 160mm TRP Spyre mechanical installation installed. The Defy 3 has a £649 RRP but is now available for £519.20 Giant Defy 3 – RRP £649, now £519.20 The Defy 3 is built with a Shimano Sora groupnine speeds– speed–with a 11-32t cassette. The chassis is made of Giant's ALUXX material, which provides a wide rigidity for an entry-level! Completing road car construction is the S-R2 wheels, and the same composite carbon holes higher than the range to help eliminate road noise through the bars. Available for £649 but reduced to £519.20 with 20% discount. The Giant Defy 4 opens the Giant Defy 4 range – RRP £525, now £420 The Defy 4 opens the Defy range but for £525 you get a lot of motorcycle for your money. The ALUXX aluminum frame technology remains, as well as the design of PowerCore oversize lower support area that helps with reactive power transfer. The 4 is equipped with eight-speed Shimano Claris transmission and an FSA seal, and maintains the SR-2 rotary material as seen on top-level models. Website: Good morning to all. I know there's some defy owners here, so I thought I'd ask. I'm pretty much decided on a 2016 Giant Defy Advanced 2 and will head to the store this weekend to get some tests and mounting. But I like to be armed with some idea what to expect so to 5,11 what size do you think I should look? I had taken a 56 cm that is approximately Giants M/L size but at least one store said that the big size and an M that is 54 ish could be better. Possible with a slightly longer stem. Help? Posted 5 years ago You have already answered your question. Try the ride and the assembly will work out. At that height it is likely to be on an M/L, but fit is not as simple as that. If the store is already discussing stems, this is a good sign of good assembly, I think. Posted 5 years ago I am 6ft2” and ride an M/L with 110mm stem, tried an L & felt like you were riding my father’s bike when I was 10, huge! Posted 5 years ago Hmmm which isto what the store said. It seems that at least the new racing bikes are pretty flashy for a long time! Definately store time fit. On the bright side, if its a 'M' its lighter! Published 5ago back to the old that S/M/L are letters not size ☺ published 5 years ago Very true. And even when they use numbers, they rarely seem to mean the same thing. Quite safe length of the upper tube is similar to the fish that has escaped sometimes. Posted 5 years ago Their sizing chart puts you both on an M and M/L, I would be trying both published 5 years ago The whole thing “brand x size on big” can be misleading. I have a Cube Peloton 64cm which apparently would be a 62 in most other brands. Just got a 2015 XL Defy that although “big size” is within a couple of mm of the cube in every size that counts. My problem is that I had a post online on the cube, but the giant D fuse post is a disadvantage – even with the right saddle forward the flow with a 100mm stem is slightly long but any shorter and my knees occasionally brush the bars when climbing out of the saddle. Sorry. OP, I know this doesn't help. They are 6'3” and a little for anyone else gits lanky considering a big ole' roadie. Posted 5 years ago Test laughs of course, but Rutland Cycling used to have a great sizing guide for height and inner leg when I got mine that was placed on. Posted 5 years ago are a fraction less than 6ft and a m/l is perfect. Posted 5 years ago Middle and a 115-120 stem. It's 179 cm and like you, it's between the size. A smaller frame and longer stem will take care of better than vice versa. Ask the store to trade stems. Giant OD2 stems are available in 5mm increments. I have a Defy Adv SL, two propels (also Medium) and a small Defy, with a 130 mm stem, but we will not go there ☺ A test lap of a medium with the standard 100 mm stem will feel too small. Add 15 mm and looks like a completely different bike. In the original compact specifications of the TCR Burrows, Giant made S/M/L.would make life easy. Professionals wanted intermediate size, so M/L came. Posted 5 years ago I am 5'10" with 32” inesame and long arms and rode a 2015 average Defy Advanced Pro 1 with withwithr 8 months. I work in a Giant brand store and I made 100+ fits for customers who buy Defy, TCR, Propel and Trinity and aftermarket customers on other brands. you always want the smaller frame that fits, to allow +/- options with stem/bar when mounted. with the larger frame you should often reduce the flow rate to get a good fit, which can carry out handling (steel) and balance (weight distribution) the head tube on the medium is shorter than the M/L and will allow additional increases in effective regulation of the flow through more pronounced drop compared to saddle our results: Defy mechanical brake is equipped with regular stem length as a motorcycle brake caliber Defy hydraulic brake is generally equipped with -10mm on the regular stem ST1. a session with a good fitter on a turbo trainer on M and M/L with some spare stems should lighten your worries Posted 5 years ago r OCKeTdOg – Member Are 6ft2' and drive an M/L with 110mm stem, tried an L & felt like you were riding my father's bike when I was 10, huge! While they are practically the same height and find the L just about big enough published 5 years ago I am a fraction under 6ft and I tried an M and M/L back – it went for the M. The M/L was too long for me. Posted 5 years ago While I am practically the same height and find the L just about big enough You are much taller than me! Posted 5 years ago 5ft 8in and totally happy on my medium. I have short legs / long body syndrome, however, so they tend to prefer longer bikes. Looks like you need a ride.pedals rather than sitting on them. them.5 years ago they are 6' and the ML is ready. Posted 5 years ago 5'10" with 31” internal leg on a medium. However, I opted for a shorter stem of 10mm. My bike has plumbing, so what's on the shore says figures. Posted 5 years ago Six foot give or take and are on a M/L with a 120mm stem. Mines in 2014 with non disks if this makes any difference. Posted 5 years ago You are much taller than me An inch Max ☺ published 5 years ago My defy is my first road bike. At 6ft, I wanted me to buy a big one. It's just a little short. Posted 5 years ago chakaping – Member 5ft 8in and totally happy on my medium. I have short legs / long body syndrome, however, so they tend to prefer longer bikes. Looks like you need a ride of pedals rather than sitting on them. Same height but ride a little. The average felt too long. Your long torso helped you cut, I guess. Posted 5 years ago I am 5'11.5” (I like to turn up to 6 feet) and I ride an ML. I tried the great and I felt too big. I have long legs and a short body (BB to Saddle top is 800mm for me). My previous bike was a Trek 56cm. Pic here: Giant Defy Advanced 3 Posted 5 years ago I am 5'7”, 30” leg and ride a M. Feel quite comfortable but an S could have been better. Posted 5 years ago I have a Composite 2012 1 and can be changed in a 2016 Advanced Pro 2 in a few months. 5ft 10.5 here and on a medium, but with a 110mm shaft rather than the 100 came with. I had a complete bicycle when I bought it (free because of a mix up from Giant at delivery ☺ ) They are short legs (30.5) and longish back. Interesting to read comments about their shortening stem to accommodate hydraulic hoods, which makes a lot of sense as they are quite large (I have 105 hydraulic on CDF) Published 5 years ago Same height, but ride a small. The average felt too long. TheLong torso helped you cut, I guess. I assume so that I can better adapt to most current large MTBs than the average ones. My other road bike has a little shorterbut I prefer the Defy management. Posted 5 years ago My brother and I was captured by the giant sip. Think of yourself “Ah Medium/Large... which must mean suitable for both mid-high drivers.” However, if you look at the giant size chart, it is suggested the low end to be 5'11” and even then, not if you have short legs. It can be a little flexible. For example – I am 5'10” but I have long legs so when I tested one the store said it was ok for me. My brother is the same height, but with his legs shorter and, immediately, even thought he felt good, he seemed too big on him. My brother and I now have both medium frames, as I felt it was also a better measure for me. Posted 5 years ago Health at all! You will get test rides and adapt the Saturday so it will report back. Posted 5 years ago Defy mechanical brake is equipped with regular length stem as a braking bike clamp Defy hydraulic brake is generally equipped with -10mm on the regular stem because the Shimano hydro STI heads sit 10mm later this is something Giant UK noticed after feedback from fitters and motorcycle staff at their dealers. thread resurrection ☺ I have a 2012 Defy Composite in the Middle, which has a stem of 110 mm on it (exit from professional bike fit,) rather than that of 100mm that came with. I am getting a new 2016 Defy Advanced Pro 2 next week and will be selling on the oldest. The above quote (e.g. shore) suggests that on the new, with hydro caps, I should be on a 100 mm stem to replicate geometry. I suspect that the bike will come with a 90mm shaft on the top, and LBS are happy to bypass with me. any updates from the people who use them? Posted 5 years ago oh well, will just go play with them at LBS then! Posted 5 years ago Take them for a test run with all means, butthat is not sure to make sure you get the right size. I tested an M and an ML, I convinced myself that the ML was the right size after a couple of turns around the block upbut after a good couple of races on it I would have gone for the M. I am 5'9” with an internal leg 30".
