

I'm not a robot

VirtualXposed is a modified version of Xposed Framework that allows you to use this system modification even if you don't have root permissions on your Android device. In exchange for not needing to root, its features are more limited than those offered by the full version.Xposed modules run separately Advertisement Remove ads and more with Turbo With Xposed, it's possible to modify the appearance and functionality of your Android. Because VirtualXposed doesn't have root permissions, it can't access the system, so it's not possible to make system modifications. Instead, VirtualXposed creates virtual spaces in which it's possible to run APK files as if they were plugins. All running apps are located inside a container. VirtualXposed is in charge of making system calls. Thanks to this, you can run modules and enjoy additional functionalities without having to root the device.You can't modify the system, but you can do many other thingsAs a result, modules that modify system settings such as GravityBox do not work. However, there are many others that do work, such as XPrivacyLua, Xlnsta, YouTube Adway, MDWechat, WeXposed, QXposed, and many others.To work properly, VirtualXposed requires virtually all permissions that can be granted to an Android app without superuser permissions.If you want to use Xposed without needing to root, downloading VirtualXposed's APK is the best way to do so. Download VirtualXposed apk most recent versions from the below given links. It has been optimized a lot with its recent releases. Customize your android device as you prefer with mods, wallpapers, custom icons, and a lot more. With the latest version of VirtualXposed, you can install Google Play Services on it with the help of MicroG project. Also, you will find the Yalp store after you install MicroG on VirtualXposed. This tool creates a virtual space where users can execute the APK of any applications as a plugin. These plugins will permit to do changes in the Operating System and the applications which have been a clone. So, this leads to free ads, access to download YouTube, provide access to easy manipulation to chat messages, track GPS locations, and many more functionalities. Version Information Tool Name : VirtualXposed Platform Supported : Android 5.0 to 10.0 Developer : Weishu Version : V0.20.3 Size : 7.5MB Downloads : 1 Million+ Here is the build of VirtualXposed for GameGuardian to hack the games in the virtual environment. I know this is possible with the apps like Parallel space, Go Multiple, 2Face, and many others. However, this method gives you exact results while applying hacks. In addition to this, the Xposed Framework is preinstalled in this app and works as expected with the modules which don't interfere with the system things since it doesn't require root access. Basically, Everybody knows that GameGuardian is for rooted android devices, but you can run it on the virtual environment. So, this method comes into the picture and works flawlessly. Weishu developed this application for Non-root Gamers who want to use this hack tool for getting control over the Coins, Money, Lives and Whatever that makes you a winner. Now, here is the download link And GameGuardian APK for Android devices - Download NameVirtualXposed for GameGuardianVersion0.22.0DeveloperWeishuSize7.9 MBLast updatedApril 29, 2025 A game hack/alteration tool for Android devices which helps you to modify the count of coins, money, HP, SP, and more. Works on most of the CPU architectures including ARM, ARM 64, x86 and x86 64. Meanwhile, runs on emulators such as LDPlayer, BlueStacks, Droid4X, MOMO, KOPlayer, Andy, Memu, Leapdroid, AMIDuOS, Windroye, RemixOS, PhoenixOS, AVD, Genymotion, Nox etc. A Quick guide lets you know the installation procedure and how you can use this tool with the games. Step 1. Once you downloaded the VirtualXposed for GameGuardian APK from our official source links, now proceed to the installation. Step 2. Go to the download folder and Tap on the APK. Install it on your android device. Some people might face a security popup while performing and it asks you to allow unknown sources. Allow it. Step 3. Open the Virtual Xposed and allow some necessary permissions. Step 4. Now, time to add the GameGuardian app into the virtual space. For this, you have to go through this procedure. Long Tap on Home or Open Menu Click on Add App Select GameGuardian APK from the Internal Storage or from the installed applications if you installed it already. Finally, tap on the install button. Step 5. Now, Add your Desired Game into the virtual space by following Step 4. Time to hack the game with the Game Guardian APP in the VirtualXposed. If you have a doubt regarding the installation, then read our full guide from here. 205,910,514 Overview: Play games your way! "GameGuardian" is a game cheat / hack / alteration tool. With it, you can modify money, HP, SP, and much more. You can enjoy the fun part of a game without suffering from its unseasonable design. Requires Android: 2.3.3+ GameGuardian Features Summary Runs on ARM, x64 and x86 devices, including x86 emulators (LDPlayer, Droid4X, MOMO, KOPlayer, Andy, Memu, Leapdroid, AMIDuOS, Windroye, RemixOS, PhoenixOS, AVD, Genymotion, Nox, BlueStacks etc.) Supports Android 2.3.3+ (Gingerbread) through Lollipop (5+), Marshmallow (6+), Nougat (7+), Oreo (8+), Pie (9+), 10+. Support work without root via different virtual spaces. Support different emulators like PPSSPP, ePSXe, GameBoy etc. Game deceleration and acceleration (speedhack) for ARM and x86 devices, including x86 emulators. Also supports both 32-bit and 64-bit applications on 64-bit devices using speedhack. Search feature: encrypted values. Search of unknown values when specifying the difference between values. Search addresses by mask. Explicit and "fuzzy" numeric searches. Text (String, Hex, AoB) search. Supports: Double, Float, Qword, Dword, XOR, Word, Byte, or Auto data-type searches. Lua scripting support. Modify all search results at once. Filtering of search results (address greater than and less than, value greater than and less than). Search in the background feature. "The fill" feature. Time jump feature. Dump memory. Customizable UI. App locale for over 50 languages. And, much, much more. Notes: ** ROOT or VIRTUAL ENVIRONMENT ONLY ** This tool only works on rooted devices or in virtual environment (without root ins limited mode)! GC can work in limited mode without root, through a virtual environment. For example, through Parallel Space, VirtualXposed, Parallel Space Lite, GO multiple, 2Face and many others. Read the help for more details. You can find more information about rooting your device at XDA Developers. Want to help us improve, or add a translation? Download GameGuardian APK 101.1 Optimized versions (no error 105) of virtual spaces for working with GameGuardian without root Released March 21, 2021 An update is highly recommended in order not to lose your files due to malicious scripts! Precedents have already been! Improved support virtual spaces. Fixed bugs in the Lua implementation. Updated translations. Hey! Contact me as per your requirement Share on Facebook Share on WhatsApp Share on Reddit Share on Telegram GameGuardian herhangi bir Android video oyununun veya uygulamasının içeriğini, orijinal olarak APK'da bulunmayan çeşitli avantajlar ve iyileştirmeler elde edecek şekilde değiştirmenize olanak tanıyan bir uygulamadır. Genel olarak konuşursak, çalışan bir süreçte kod enjekte ederek ve istenen parametrelerden bazılarını anında değiştirerek çalışır. Bu, video oyunları dünyasında geleneksel olarak "hile" olarak bilinen şeye dönüşür.Ne yaptığınızı biliyorsanız kullanımı kolaydırGameGuardian bir kere yüklendiğinde, herhangi bir video oyununu çalıştırırken uygulamayı arka planda çalışır durumda bırakabilirsiniz. Ekranda yarı şeffaf bir simge göreceğiniz için uygulamanın arka planda çalıştığından emin olabilirsiniz. Sonuç olarak, oyunun içindenkey tek yapmanız gereken yarı şeffaf butona dokunmaktır ve herhangi bir parametreyi değiştirebileceğiniz bir düzenleme paneline erişebilirsiniz. Bunu yapmanın en kolay yolundan biri, ekrandaki masdeni para, elmas veya can sayısı gibi belirli bir sayıya bekmanızdır. Belirli bir numarayla abıktan sonra GameGuardian uygulamasının düzenleme panelini açmanız yeterlidir, bu numarayla arayan ve istediğiniz başka bir numarayla değiştirin. Bu kadar basit. Reklam Turbo ile reklamları ve daha fazlasını kaldırın Bir uygulamanın ya da video oyununun dahili saatini kontrol edinGameGuardian uygulamasının bir başka ilginç özelliği ise normalde belirli bir hedefe ulaşmak için (bir bina inşa etmek, enerjiyi yeniden şarj etmek gibi, can elde etmek, vb.) belirli bir saat veya dakika beklemeniz gereken video oyunlarında anında avantajlar elde etmek amacıyla bir uygulamanın ve cihazın dahili saatini değiştirebilme yeteneğidir. Tekrar ediyorum bunu yapmak çok kolaydır. Zaman akışını hızlandırmak veya yavaşlatmak için GameGuardian tarafından gösterilen yüzen simgeye dokunun. Bu sayede normal şartlarda birkaç saat sürecekle olan işlemler yalnızca birkaç saniye sürmektedir. Artık tüm canlarınızı geri almak için 24 saat beklemenize gerek yok.Uygulamayı kullanma riski kendi sorumluluğunuzdaSöylemeye gerek yok, istisnalar dışında, GameGuardian video oyunlarında hile yapmak için tasarlanmıştır, bu nedenle manipüle ettiğiniz uygulamanın ve video oyununun geliştiricileri oyunda değişiklik yaptığınızı belirlersenle yasaklanma ya da belirli süreliğine hesabınızın askıya alınması riskiyle karşı karşıya kalırsınız. Bu uygulamayı kullanmak eğlenceli ve faydalı olsa da riskli olabilir. Bu nedenle, GameGuardian uygulamasının diğer oyunculara karşı yarışmadığınızı çevrim dışı video oyunlarında kullanılması tavsiye edilir. Aksi takdirde, bu tür uygulamaları kullanmayan rakiplerinize karşı da haksız bir avantaja sahip olursunuz.En sevdiğiniz video oyunlarını tüm ayrıntılarını keşfetmek istiyorsanız, GameGuardian uygulamasını indirin. Uygulamanın en yaygın kullanımının genel olarak ipuçları ve hilelerin kıldını açmak olduğu doğru olsa da, video oyunlarının ve uygulamaların iç işleyişini basitleştir ve erişilebilir bir şekilde keşfetmenize de olanak tanıır; bu, diğer çok az uygulamanın sunduğu bir şeydir. GameGuardianbüyük bir topluluk ve hatta hiçbirini herhangi bir sorun bildirmemiş birçok geliştirici tarafından desteklendiği için, prensip olarak güvenlidir. Bununla birlikte, GameGuardian'ı kullanmak oyuncu için belirli riskler taşıyabilir. Tüm oyunları GameGuardianizerinde mevcut değildir. Bazı oyunları uygulamayı kullanp kullanmadığınızı algılayabilir, bu nedenle liste sürekli değişir. Su anda Crash of Cars, Dungeon Quest ve Subway Surfers oynatabilirsiniz. Hayır, GameGuardiançevrimdışı oyunları hekeleyemez. Çevrimdışı oyunlar, oyun ve oyuncu verilerini şifreli sunucularda depolar, bu nedenle GameGuardianoyunun güvenliğini tehlikeye atacağı için bunları değiştiremezler. Evet, GameGuardianoyun eklemek veya özelliklerini kullanmak için herhangi bir ödeme gerektirmeyen ücretsiz bir uygulamadır. Note: v0.19.0 supports only 64-bit app. So, we ditched 32bit support and If you want to use a 32-bit app, then you should use v0.18.2. VirtualXposed (0.18.2)VirtualXposed for GameGuardian (0.18.2) 5 March, 2021 19 April, 2021 We want to use GameGuardian on Android 11 without rooting the Android 11 system To use GameGuardian without root on Android 11, we can use a virtual space to achieve it. There are many great free virtual space software available, but some won't work with Android 11. For a list of them, we can refer to GameGuardian's list here The most voted one is Parallel Space, which is marked as best choice, but currently it does not work on Android 11. Fortunately, the second highest voted, VirtualXposed works fine on Android 11 from testing nevertheless the official website stated it supports Android 5.0 - 10.0 (Your mileage may vary due to different factors) Note!!!! It's not guaranteed that all Apps will run inside VirtualXposed, infect, it's not even guaranteed that any Apps will run on the top voted ones due to different reasons, there maybe some workarounds, but they may or may not work. (Note that some Apps won't even run on rooted Android devices, though there are ways around it too) 1 Click here to download VirtualXposed or Download from Project GitHub page FYI: Link to VirtualXposed official website, Official website2, Project GitHub page, GitHub Release download page Then install VirtualXposed 2 Download GameGuardian apk from official website 3 Download or install application/game we want to modify using GameGuardian 4 Launch VirtualXposed 5 Tap on the button with six dots from the screen 6 Tap on Add Application 7 Find the installed application from the list. Tap on the one we want to install in the VirtualXposed, then Click on install button the bottom of the page ORTap on the + button from bottom right corner find the apk we want to install inside the VirtualXposed, then install it 8 Install GameGuardian inside VirtualXposed (This step should only be performed for first time, or GameGuardian upgrade) Note: When installing current latest version of GameGuardian on Android 11 may still pop up a window stating this App is written for old Android versions, ignore it, nevertheless it should still work. 9 Once done we should have desired applications and GameGuardian installed. 10 Now we can use GameGuardian with our application inside VirtualXposed To control/adjust permission/privilege for apps, we can download and install XPrivacy from GitHub Related: XPrivacyLua Project GitHub page To run Virtual Xposed application, it requires almost all permissions. Because the application runs inside the VirtualXposed we can't guarantee what permissions they are requesting.With the Permission Manager "XprivacyLua" introduced by Weishu, now you can adapt the permission for specific applications. Weishu did an excellent job to get rid of privacy issues by adding the Permission manager " XprivacyLua".Virtual Xposed has enhanced a lot with many more features in its frequent updates. You can easily install Google Services in it with the support of the MicroG project. Besides, you can run any application which needs Google Play service API's.Furthermore, you could find the Yalp Store after installing the MicroG on your VXP. You can directly get updates from the Yalp Store after installing it on your device. So, there is no need to install applications again from other outsources in the virtual space to get updates. You can easily update them through Yalp Store.You can get the Download link of VirtualXposed APK latest version from the below. There you could find a separate version for the GameGuardian App in link. Version Information Name : VirtualXposed Developer : Weishu Version : 0.20.3 Size : 7.5 MB Last update : Feb 06,2021 Downloads : 1 Million + Supports : Android 5.0 to 10.0 How to Install VirtualXposed APK on Android Device Let's install VirtualXposed by following the below guidelines. Installation is quite easy and this process will not involve flashing or any other technical conditions. Note - Remember to enable unknown sources if you do not install apps from other sources (Not from play store). Follow these steps to install VirtualXposed APK on Android Device STEP 1: Download Magisk Manager Apk on your Android device from the above. Cautions : You will get a message to allow the source only if you don't install APK's before. Step 2: Click on VXP to install it. Step 3: Launch the app and give permission. If you completed the above steps now you should install MicroG (Google Play services) on VirtualXposed. How to Install MicroG (Google Play services) on VirtualXposed STEP 1: Go to the settings of your device. Click on Advanced settings > Install/ Uninstall Google Services. STEP 2: Confirm to install. You have to wait until it completes. This will depend on your internet speed. That's all you have to do. Now, you can add any application you need GMS core to run. How to Install Applications on VirtualXposed You can easily add any application either an installed version or other sources (apk) and update these applications with the support of Yalp Store. Go to Yalp Store > Check for Updates > Downloads > Install STEP 1: Click on the menu icon from the launcher home. STEP 2: Navigate to Add App and confirm. Then you can add an app that you have already installed or tap on the + Floating button to install APK's. How to Install Xposed Module on VirtualXposed on Android Device You can find the working modules list from this page or just go to Settings > Recommended list. STEP 1: Swipe up to open Apps drawer and there you can see Xposed Installer that is already installed on Virtual Xposed. Launch it and then navigate to the download section from the menu. STEP 2: Next, Search the Module which you like to install. STEP 3: Next, enable the module in the module section STEP 4: Next, enable the module in the module section. STEP 5: Reboot the Virtual Xposed application. (Do not require System Reboot). That's all you have to do. Now, you can test whether the module is working or not. Virtual Xposed for GameGuardian APK [No Root] VirtualXposed for GameGuardian can be used to hack the games in the virtual environment. If you are familiar with the apps like Parallel space, 2Face, Go Multiple then you have an idea what I'm supposed to talk about in this post. Just like these applications, Virtual Xposed for GameGuardian gives you the exact experience while applying hacks. The Xposed Framework is preinstalled in the app and performs as expected with the modules. Since it does not require root access it does not interfere with the system.It is popular that GameGuardian is for rooted devices, but it can run on the virtual environment. So, this method works fine and flawlessly without any issues. Download VirtualXposed for GameGuardian APK on Android Device Weishu introduced this application for No root gamers who would prefer to use this hacking tool for getting control over the coins, lives, money, and anything that makes you a winner. VIRTUALXPOSED FOR GAME GUARDIAN Version Information Developer : Weishu Version : 0.20.3 Size : 7.5 MB Last update : February 06,2021 Downloads : 1 Million + Supports : Android 5.0 to 10.0 What is GameGuardian APK? This is known as a game hack/modification tool for Android devices which supports you to alter the money, count of coins, HP, SP, and more. The GameGuardian APK works on most of the CPU architecture including x86 and x86 64, ARM, ARM 64. In addition, this runs on emulators such as LDPlayer, Droid4x, MOMO, KOPlayer, BlueStacks, Andy, Memu, Leapdroid, RemixOS, AMIDuOS, Windroye, PhoenixOS, AVD, Genymotion, Nox, etc. In this tutorial, we are going to guide you to install GameGuardian and how to use this tool with the games. STEP 1: Once it is completed, now it's time to start the installation process again. STEP 2: Next, navigate to the download folder and click on the APK. Then install it on your Android device. If you get a pop-up a notification asking allows unknown sources. Enable unknown sources. STEP 3: Launch the VirtualXposed and allow requested permissions. STEP 4: Next, add the GameGuardian application into virtual space. Follow the below steps to proceed. Long press on home or launch menu Tap on Add app Select GameGuardian APK from the internal storage or from the installed application that you have installed. Finally, click on the install button. STEP 5: Now, it's your turn to add your favorite game into virtual space by following Step 4. Let's hack the game with the Game Guardian App in VirtualXposed.Video Tutorial Frequently Asked Questions 1. How VirtualXposed performs, based on a review of the source code and dev response? Virtual Xposed works as it runs inside VirtualApp, a container-like library that covers around android system calls to grant running APKs as plugins inside the original application. They maintain an independent fork of VirtualApp excluding these closed-source spots. Using Epic, an open-source library that can process xposed hooks. 2. Is VirtualXposed safe to use? Yes, VXP is safe to use, because it won't modify any system partitions. This is really a sandbox environment that won't affect your usual applications or the system. 3. How does VirtualXposed work? This allows users to Xposed Modules without root. The application works by letting all the apps to run inside VirtualApp and then hooks the process to Xposed using Epic. Both of the libraries are open-source and available on GitHub. 4. What is VirtualXposed apk? It is simply an application that can create virtual spaces in which we are able to run APKs as plugins. Besides, we can run xposed modules without rooting/unlocking the bootloader or altering system images in these parallel spaces. This is entirely based on VirtualApp and Epic for processing Xposed hooks. 5. Safety and Security Issues related to Virtual Xposed? To use this application it requests a ton of permissions and authorized has given that it has to follow all of these APIs.
