subscription options. Dopamine is a free music player for Windows 10 that ticks many of my boxes. that lets you access your songs, albums, playlists, artists, or genres. If you've owned any Apple device in your entire life, then you've probably used iTunes on your Windows 10 PC for free, too. You can use iTunes to load your offline music

(Image credit: Steven Mayall)MusicBee is a free music player created for serious music lovers and includes everything you need to manage and enjoy your collection, no matter how large (it's reportedly handled a library of over 500,000 tracks without a hiccup). This free music player is designed to make the most of
your PC's hardware, including top-end soundcards and surround-sound setups, with upmixing for stereo sound. Continuous playback eliminates silences between tracks (ideal for Pink Floyd fans), and you can choose to add silences or fades, normalize the volume, and experiment with the equalizer. The free music player supports almost every audio
 format around and converting files is simplicity itself, with presets for different playback devices (though for MP3 encoding you'll need to download the LAME codec ). If all of that isn't enough, there's even an Android app for controlling MusicBee remotely, and support for WinAmp plugins. You won't find a more comprehensive free music player, and
although it's not open source, it's completely free to use and tinker with for personal use. Read our full MusicBee review (Image credit: AIMP DevTeam) Like all the best free music players, AIMP makes organizing your songs a breeze - even if your collection is currently a sprawling mess of tracks in different formats and locations with incomplete or
missing metadata. Your AIMP library can be built using files from multiple directories and ripped from CDs, with automatic track numbering and tag filling to help you get it in shape. AIMP supports a huge number of formats, and additional encoders are available as user-created add-ons. Most music player extensions are extra visualizations and skins
that, although cool, have little practical use. By contrast, AIMP's plugins include some real gems. Some highlights are a YouTube extension for controlling the player remotely. The app also features some unusual built-in tools, including
an alarm clock function that starts playing at a certain time, a wind-down setting that shuts down your PC at the end of a playlist, and a voice remover for making your own karaoke tracks. It's not as feature-filled as MusicBee, but its thoughtful design and carefully curated feature set earn this free music player a respectable second place. Read our full
AIMP review(Image credit: Ventis Media) MediaMonkey plays and organizes music and video, and unlike some dual-purpose media players, it does an excellent job of both. It identifies tracks with missing industry-standard
formats. You can also tag music during playback, which is a great option that avoids the need to preview snippets of tracks before labeling them with a mood or genre to generate playlists. Media Monkey arranges your music library in a logical hierarchy, and its File Monitor ensures everything is kept up to date as you add, edit, and remove files. It
works well, but if you want full manual control, you need a third-party plugin. As a slightly trimmed-down version of a premium product, MediaMonkey's interface has a little more gloss than its open-source competitors, but at the expense of some features. The paid-for Gold version includes a party mode that locks the interface to prevent guests from
messing with your carefully curated playlist, built-in conversion for TVs and mobile devices, and MP3 encoding for ripped CDs. None are essential, but their absence pushes MediaMonkey review (Image credit: Peter Pawlowski) foobar 2000's advanced tagging tool makes light work of cleaning up a messy

customizable modular interface that gives you the information you want in a format convenient for you. Modules include album art, a search box, a playlist manager, and various visualizations, with optional tabs for easier navigation. Custom layouts can be saved as themes for future use, and you can experiment with different settings using a built-in

music manager that can play almost any format without installing any additional codecs - and convert between them, too.VLC can also stream music from a local network or the internet, including internet radio stations, which you can set up as a playlist for guick access. Managing your music is easy - just drag files and directories into the Media

VLC also supports extensions. Most are designed to optimize video playback, but a few - including ones for silencing ads on internet radio stations - are
specifically for music lovers. VLC is lightweight and works happily on all versions of Windows from XP onwards. Versions for Mac, Linux, Android, and iOS are also available.
