Websites to watch live matches

By Alexandra Bee Streaming a live soccer match in your Web browser allows you to watch an entire soccer game of your choice without the need to download or install additional software or files. Whether you're an avid soccer fan or you are looking to catch a game not available with your cable service, streaming online soccer matches is possible by using a variety of online resources and websites. Launch your computer's default Internet browser (such as Google Chrome, Internet Explorer, Safari, or Mozilla Firefox). Browse to a well-known online soccer-streaming service, such as ESPN (espn.go.com), Live Soccer TV (livesoccertv.com) or Fox Soccer (foxsoccer.tv). Look through the available online game schedules for each soccer match to see the times and where the games are being played. Many online soccer-streaming services feature schedules by teams and time, making it simple to view upcoming as well as past soccer matches. Click on the game that you wish to view to get more information and details on the match and also begin streaming it live. Locate and press "Streaming," "Live" or "Play" to begin watching the match. Allow the live video of the game to begin buffering and streaming. Each computer's streaming speed varies according to the speed of the website, the video stream and your own computer itself. Watching CNN live doesn't require some expensive cable package. These days, you simply need to sign up with the right streaming service. Many of the best live TV streaming soices include CNN in their channel packages, though there are a select few where you won't find this popular news channel. Source: Drew Angerer/Getty Images When it comes to breaking news, watching live is critical if you want to receive the most up-to-date information, and not all sources are as reputable as others. Luckily, you can stream CNN live with services like Sling TV and Hulu with Live TV without ever getting locked into a cable contract. Can I watch CNN live online? Yes! CNN is available to watch live on many popular live TV streaming services. You can stream CNN live using Sling TV, YouTube TV, or Hulu with Live TV. Philo and fuboTV are two popular services that do not offer access to stream CNN at this time. If you are a cable subscriber already, you can also stream CNN live by heading to CNN's website and logging in with your current TV service provider. Sling is the most affordable option There are a few ways to watch CNN live without signing up for a cable subscription, though the most affordable way to watch is with Sling TV. This live TV streaming service gives you access to over 30 of the most popular live TV channels including CNN starting at just \$35 per month! There's really no comparison here in terms of cost and channels offered. CNN is available on both the Sling Blue and Sling Orange plans, or you can choose the Sling Orange + Blue plan that combines all of their channels into one package for \$50 per month. Stream CNN live when you start your subscription at Sling! This live TV streaming service starts at just \$35 per month and even includes access to a cloud DVR with 50 hours of storage. While there's no live stream of CNN on the free version of YouTube, you can subscribe to YouTube TV to watch CNN live. YouTube TV is priced at \$64.99 per month and includes over 85 other channels with your membership. You can also record shows without any storage limits and never worry about additional fees or a long-term contract. YouTube TV also includes NFL, NBA, and MLB networks, along with popular channels like BET, Comedy Central, PBS, MTV, and Nickelodeon, among many more. YouTube TV costs \$65 monthly and lets you stream over 85 live TV channels with your subscription, including CNN! Start your free trial now to check out the service for 2 weeks before paying for your membership. Though you can't watch CNN for free most of the time, there are a few ways you can stream CNN live without paying for a limited amount of time. For instance, you can start a free trial at YouTube TV or a Hulu with Live TV free trial. Both of these services let you watch CNN as a member, but if you don't want to pay to become a member just yet or if you don't want to pay to watch CNN live, starting a free trial is a smart way to bypass the cost — if only for a little while. We may earn a commission for purchases using our links. Learn more. The Premier League is back! After being put on ice for almost three months thanks to the Coronavirus crisis, top flight English football returns to stadiums - albeit empty ones - and TV screens this week. Needing just two wins to seal their first league title in thirty years, Liverpool's dream of being crowned champions looks like being a formality, with the Reds ahead but could the weight of expectation cause Jurgen Klopp's side to stumble? Arguably the more intriguing battles that are left to play out come in both the race for European qualification and in the fight for survival at the foot of the table. Source: Premier League Man City rest in second, a hefty 25 points behind Liverpool. While that would normally earn Pep Guardiola's team a spot in next season's Champions League, City are currently facing a ban from UEFA for breaking financial fair play rules. That potentially opens up a Euro spot for another team in the pecking order, with Leicester, Chelsea, Man United, Wolves and league newcomers Sheffield United all going into this set of delayed fixtures with a legitimate chance of European qualification. Meanwhile, at the foot of the table, its looking like any three from six teams face the drop. Norwich are marooned at the bottom with 21 points and looked doomed with Aston Villa, Bournemouth, Watford, West Ham and Brighton all fighting to preserve their Premier League status. Read on for full details on how to get a live stream of the Premier League 19/20 restart no matter where you are in the world with our guide below. Premier League 19/20 restart : Where and when? English top flight football resumes on June 17 with all 92 remaining matches set to be played over the course of a truncated five-week period. This means they'll be at least one match played each day with four games set to be played on Saturday and Sunday. All matches are set to be played behind closed doors, while the number of substitutions available to teams has been increased from 3 to 5 in an effort to protect player welfare. Watch the Premier League online from outside your country We have details of all the US, UK, Australian and Canadian broadcasters of the Premier League further down in this guide. If you're looking to watch the action, but find yourself away from home then you'll run into problems when trying to stream your domestic coverage online from abroad as its likely to be geo-blocked. That's where a VPN (Virtual Private Network) can be a lifesaver. They allow you to virtually change the ISP of your laptop, tablet or mobile to one that's back in your home country, letting you watch as if you were back there. VPN's are incredibly easy to use and have the added benefit of giving you a further layer of security when surfing the web. There are lots of options, and we recommend ExpressVPN as our #1 pick due to its speed, security and ease of use. It can be used on a vast array of operating systems and devices (e.g. iOS, Android, Smart TVs, Fire TV Stick, Roku, games consoles, etc). Sign up for ExpressVPN now now and enjoy a 49% discount and 3 months FREE with an annual subscription. Or give it a try with its 30-day money back guarantee. Looking for other options? Here are some alternatives that are on sale right now. No matter where in the world you may be, a VPN is one of the easiest ways to watch the Premier League. Get in on this deal now! With no fans allowed in the grounds, the historic decision has been made to let every remaining match of the season to be broadcast live, including for the first time 3pm kick-offs. The majority of the matches will be shown via the league's three major broadcast partners in the UK: Sky, BT, and Amazon Prime. Sign up for BT Sport Monthly Pass The good news is you don't necessarily need to be a subscriber to watch some of the games. Sky will be showing 25 of its 64 games it has live rights to on its free-to-air channel, Sky Pick, while Amazon has followed suit and revealed their four games will be free to watch on Prime. In the UK, Amazon will also air four matches on Twitch for free. Fans in the UK will also have the option to stream #PrimeVideo's four live @premierleague matches on @Twitch for free— Amazon Prime Video Sport (@primideosport) June 18, 2020 If that wasn't enough, free-to-air public broadcaster the BBC will also be airing four fixtures during the remainder of the season. The two headline fixtures of the opening week see Arsenal take on Man City at home on Premier League restart day (Wednesday, June 17) at 8.15pm BST, while Spurs' home clash with Man United on Friday, June 19 at 8.15pm could have a big bearing on both team's European football qualification hopes. How to watch the Premier League online in the U.S. NBC and Telemundo remain the exclusive rights holders for showing live Premier League matches in the US. NBC top-tier Premier League Pass, will give you access to all 92 remaining matches of the season live, as well as offering highlights, analysis and on-demand replays. The broadcasts are available on iOS, Android phones and tablets, desktop web browsers, Apple TV (Gen 4), Roku, Amazon Fire TV, AndroidTV and Chromecast devices connected via HDMI via NBC's dedicated app. If you're outside of the States and want to tune in to NBC's coverage, you can use a VPN as mentioned above to watch the same feed you would from home. In most areas of the U.S. you'll be able to watch the Premier League relaunch via Sling's Blue package. Sign up now and get free TV for 3 days. Optus Sports has a three-year deal with the Premier League meaning it has exclusive rights to show every single fixture live Down Under - including the final 92 games of the delayed 2019/20 season. Those braving the unsociable kick-off times can stream Optus Sport coverage via their mobile, PC or tablet, and can also access the service on Fetch TV, Chromecast or Apple TV. Those who aren't already signed up to the Optus telecommunications network can also take advantage of monthly subscriptions to Optus Sport and watch all the games live. The service is available for AUS\$15 per month and can be accessed via Google Play or the App Store. If you're outside Australia and want to tune in to Optus Sport, you can use one of our favorite VPNs and watch the coverage from another nation. Live stream the Premier League live in Canada Sports streaming service DAZN is the sole rights holder for live Premier League matches in Canada. The network is set to show all of the 92 remaining fixtures of the season live, as is offering a one-month free trial, followed by a rolling \$20-a-month or annual subscription of \$150. The dedicated DAZN app is available for iOS and Android phones and tablets, as well as Amazon Fire TV, Android TV, Chromecast, Apple TV plus most modern Smart TVs. Of course, if you are outside Canada, you can follow the VPN route above and tune in with a DAZN log-in all the same. We may earn a commission for purchases using our links. Learn more. March 17, 2016 5 min read Opinions expressed by Entrepreneur contributors are their own. You're reading Entrepreneur Middle East, an international franchise of Entrepreneur Media. Great; your new website is complete and ready to go live. Exciting times. Although it can be tempting to rush along and push the "go live" button, there are literally dozens things that one should check and verify before making that call. These checks range from aesthetic, content and style checks to functional, security, performance and search engine optimization (SEO) checks. Any reputable web developer will automatically do most of these for you, which is great, considering that many of the checklist items are quite technical. But there are also a number of items that, as a website owner, you should verify yourself to make sure you're satisfied. Here are five such items.1. 301 redirectsIf it's a website redesign that you're doing, then you'll probably want to set up 301 redirects. The reason is because your current website pages have been indexed by search engines, and they have some sort of page rank associated with them that you'd probably want to maintain. When you update your website, these pages will more than likely either not exist anymore, or will have moved.For example, say on your current website, you have a page about your company located at www.domain.com/about/, and on the new website, this page has changed to www.domain.com/company-profile/, then you'll want to tell the search engines about the move. 301 redirects essentially tell search engines where the corresponding pages on the old site reside on the new site. This way the page rank may be transferred from one to the other and not lost in the ether. Be sure to ask your website developer to set this up for you.2. AnalyticsHaving a brand new website is great, but it's even better when you have analytics installed. Analytics will tell you all sorts of useful information such and where your website visitors are coming from, which pages they visit, where they leave your website from and so on. Installing analytics may not be done automatically by your web developer so you'll need to check that it is. Google provide a great free analytics tool (which is very straightforward for the web developer to install. It's recommended that you use this as a minimum. There are also a plethora of more advanced but paid analytics tools out there, if you're so inclined.3. Browsers and devicesThis task would have been done by your web developer, but there's no harm in checking that you are happy with what's been done, since, as a website owner, it can be easy to overlook this. Just because you use Firefox as your default browser and your phone is a Samsung Galaxy S does not mean that everyone else does. Your customers will be using all sorts of browsers and devices, so it's important that the site works on everything.Related: Launching A Startup? Ask Yourself These Questions FirstFor browsers, you'll want to check your website on Chrome, Firefox, Internet Explorer and Safari. To see which browsers to focus on more check the analytics of your current website to see what most people are using when they visit your site. If it's a brand new website you can go by the statistics here: ♦️I'll also want to check your site on some phones and tablets. It'd be close to impossible to check everything, of course, but there are a couple handy browsers tools you can use to come close. This is one for example: sure to check everything- not just how it looks. For example, fill in any forms you might have and make sure they work. Does the form validation work? Did you get the email response? Perform a search, use the map, download the press release, etc. In short, be sure to check the interactive features, as well as the style and presentation.4. PerformanceSpeed is very important these days. It can mean the difference between a high bounce rate and a low one. Even your page rank is affected by the speed of your site.It may be tricky to check this before actually going live, because prior to the launch, the site is most probably sitting on a developer/staging server, and so the results may not be accurate. You can check it as soon as the site goes live though, and there are several tools available for this. One handy one is provided by Google here: . Go live at the right timeLastly, even if your website is ready and checked and verified to go at the end of the week, it's not recommended to go live, say on a Thursday. Computers can be a bit unpredictable at times, and things can often go wrong. Either the server is not fully compatible with the website, or data is lost on the upload. Whatever it is, going live before the weekend is risky, because you could end up with a broken website sitting in all its glory for the world to see for a couple of days. It's much safer to go live at the start to middle of the week, so that in case something is wrong, your web developer can fix it right away.Related: Keep It Simple: Why Simplicity Is Key To Making Your Brand Win
